

What is Carbon Neutral?

It is broadly accepted that greenhouse gas emissions are having a negative impact on the environment. The burning of fossil fuels (gas, petrol, diesel, etc.) used in industry, transportation, heating and the majority of electricity production, produce large quantities of Carbon dioxide (CO₂), the most common greenhouse gas.

These gases prevent heat escaping through the upper atmosphere, insulating the world and creating a “greenhouse effect”. More amounts of CO₂ contribute to the increase in global temperatures resulting in the melting of the polar ice caps, lowland flooding and an increase in inhospitable areas. To reverse this trend we need to reduce the amount of CO₂ being emitted by consuming less energy and burning less fossil fuels.

Courier Systems is steadily reducing its carbon footprint through investment in alternative fuel vehicles, sustainable procurement; recycling and improved energy management.

All the remaining CO₂ we produce is offset through sustainable and renewable energy projects globally. These include methane capture, wind power, biogas, energy efficient technology; reforestation and waste heat recovery.

When you book a courier with Courier Systems we guarantee to offset the equivalent amount of CO₂ produced by the delivery of your consignment. We reduce your carbon footprint at no additional cost.

Courier Systems is a Carbon Neutral company.
